

# FUDDO

**THE INNOVATIVE SOLUTION  
FOR PRIVILEGED  
SESSION MANAGEMENT**

THE COMPANY

SECURITY OFFICER  
(LIVE PREVIEW)

**WHEEL FUDO PSM** is a privileged session monitoring solution. It monitors connections with servers and records users' actions, including mouse pointer movements, keystrokes and transferred files. Being a self-sufficient solution, it doesn't require installing agent applications on monitored servers, client software for recording connections or auditing programs for reviewing recorded content.

---

#### **Supported protocols:**

- command line: SSH, Telnet, Telnet 3270
- graphical interface: RDP, VNC, X11
- database: Oracle, MySQL, MS SQL (TDS)
- others: HTTP, HTTPS, modbus

#### **Session supervision:**

- proactive session monitoring - automated actions upon detecting defined patterns
- web-based session player - enables real-time users supervision; terminating, pausing or joining ongoing sessions
- sharing session material via URL

#### **Session material management:**

- RDP and VNC sessions OCR
- exporting recorded material to video format
- commenting and tagging sessions for improved session materials processing and analysis
- full-text search and advanced filtering options

#### **User management:**

- Active Directory and LDAP directory services support
- Lieberman ERPM, Thycotic Secret Server and Hitachi-ID PAM support
- temporary access management to monitored servers

#### **Business intelligence:**

- user productivity analysis
- direct work efficiency comparison

#### **Security and high-availability:**

- multi-master cluster configuration ensuring constant service availability and load balancing
- AES-XTS 256 data encryption

---

**WHEEL Systems** is a leading vendor of innovative IT security solutions. We specialize in access monitoring to corporate networks, SSL/TLS protocol decryption solution, user authentication and authorization. The company has been growing dynamically ever since its founding in 2004 and currently serves 200 clients through a network of 50 partners in over 15 countries. WHEEL Systems was the first in the world to develop an offline token application for mobile devices.

Its flagship remote access monitoring solution - WHEEL FUDO PSM, was named the best IT solution for the financial sector in 2015.
